PROJECT SUMMARY

The facility renovation project looks to potentially expand the existing 10,000 sq ft skate park into a nearly 20,000 sq ft multi-use facility. The larger facility would support increased programming for patrons in designated areas, while also providing a multitude of additional features for the general public to utilize. The project would potentially include updated amenities aligning with more current use in the sport. Additional technology, shade, and picnic area upgrades are envisioned to support the existing and expanded use of the facility for patrons and spectators.
