

# Standard Conditions for Temporary Portable Generators

---

Per the memo sent to all wireless providers on November 1, 2021, the following conditions must be met before temporary portable generators are placed on District property.

1. Regardless of circumstance (i.e., planned, and unplanned electrical outages), a provider must first gain approval from Conejo Recreation and Park District to locate temporary portable generators on District property. An encroachment permit form must be completed and the provider must describe the need for and duration of use of the equipment.
2. Conejo Recreation and Park District will specify the precise location on District property to place the temporary generator and path of travel to the selected location.
3. Following approval, for safety purposes, deployment and placement of the generator must include a locked temporary fence around the equipment for the duration of use.
4. Providers are responsible for cleanup of gas spills or leakage of equipment. Cleanups must be addressed immediately upon knowledge of the spills and before removal of equipment.
5. Removal of the temporary generator and fencing must be within 24 hours of end date indicated on the encroachment permit form.
6. The cost per day to place the generator on District property is \$50. Providers not obtaining prior approval and locating a portable generator on District property will be assessed \$75 per day, payable upon receipt of invoice.
7. For more information and to obtain an encroachment permit form, contact:
